

BASS  ROCK

OUR CAPABILITIES

## CAPABILITY STATEMENT PROJECT DIAGNOSTICS

**Bass Rock is uniquely positioned to approach client projects from a fresh and independent perspective, taking an objective view of the work undertaken to date, providing insights into factors affecting project success, such as delays, cost overruns, or quality issues.**

The goal is to identify and implement corrective actions and improvements to ensure the project stays on track and achieves its objectives. Our targeted approach, analytical expertise, and commitment to practical solutions enable organisations to enhance project performance, address issues proactively, and achieve successful outcomes.

### Capabilities:

**Project Analysis:** We evaluate the projects performance against its objectives, timelines, and budget to identify deviations and areas of concern. This involves applying Root Cause Analysis to investigate and determine the underlying causes of identified issues to address the core problems rather than just symptoms.

**Standardised Approach:** We examine project processes, data and progress is examined against the American National Standards Institute (ANSI) 748 Standard for Earned Value Management by assessing Organisational Structure, Schedule & Resourcing, Budget & Authorisation, Sub-contract Management, Accounting & Reporting, Change Management, Risk Management and Technical Aspects.

**Unique Process:** We conduct interviews with key client stakeholders to understand the project context. This provides the basis for undertaking detailed analysis of project data then facilitating structured interviews with suppliers, to qualify areas of concern. We present key findings to clients in the form of a health check report highlighting observations and corrective actions then support their implementation.

**Stakeholder Feedback:** We gather input from stakeholders to understand their perspectives and concerns, ensuring that all viewpoints are considered in the diagnostic process.

**Action Plan Development:** We identify, and document lessons learned from the diagnostic process to inform future projects and enhance overall project management practices. Creating a detailed action plan with specific recommendations and corrective measures helps our clients to address identified issues and improve project performance.

### Experience:

**Skilled Consultants:** Bass Rock has experienced and qualified project managers and chartered engineers who undertake this process for client projects.

**Tailored Approach:** We have tailored our standard process to address the specific priorities of individual clients and scaled our approach against project complexity.

Our comprehensive services are designed to enhance project outcomes by addressing root causes, managing risks, and optimising processes.
